MY PROJECTS

HaveTo - Cryptocurrency (React js)
- haveto is one type of cryptocurrency coin, and before we launch the coin we are collecting funding for coin like I.P.O. in the share market
- User has own dashboard for cheking status of their profile, transactions and other details such as token price, convertor, saling etc.

Finsara app (Flutter)
- The main role of system is staff and merchant
- Staff has rights to admin levels of functionality and manage transactions and profiles and many more.
- Merchant can scan QR code, add his/her shop details, manages their profile, get rewards after adding a new shop etc.

Leave Management System (React-Redux(saga))
- This web-app depicts the employee to take leave and also his/her dashboard some information suvh as announcements,leaves taken etc.
- Admin can approve and decline leave, if approve/decline send mail for same.

Furniture Management System (Core- PHP)
- This system is useful for buying a furniture online and also Customize furniture and Compare furniture and also system generates report.

Village Vyapar System (Laravel Framework)
- This web application allows customer to sell the product and others can purchase or vice versa (i.e. Customer to Customer).It provides a communication medium via chat board.
